

Phonak Roger Portable Room Systems - Overview

Phonak Roger Room Systems are designed with accessibility in mind, to help people with hearing loss to hear and communicate better in meeting rooms, training room scenarios, small venues, and other similar group situations.

Each system is very portable and comes with its own bespoke protective case.

Designed for ease of use, a Roger Room System can easily be moved from room to room and ensures a high level of inclusivity for everybody in the room, both hearing aid wearers and those without hearing aids too.

Phonak Room Systems are available in several carefully thought out pre-designed configurations, which can be expanded or blended to cater for specific needs and challenges, if appropriate.

Mostly, the standard room systems will match your needs well and should not need any adjustments.

If you are unsure about what you need or want to talk about extending the capabilities of one of our room systems, for instance, extra transmitters, extra receivers or larger rooms, please just ask.

Our Roger Room Systems are supplied widely into many different areas of life where groups of people might gather.

The general benefit of a Roger Room System is to enable people with and without hearing loss to hear better in challenging acoustic environments.

Typical use cases might be people attending a central meeting location on an ad hoc basis, perhaps a meeting or social event in a large room, a training room scenario, or a one-off presentation in a smaller conference room.

A Roger Room System can, as well as enabling inclusivity day to day in your location, also meet the needs of people visiting just for the day.

If an attendee has their own personal 'Roger' equipment, they can bring it with them and connect up to a Roger Room System and easily participate - or simply make use of the room system.

The best way to frame a Phonak Roger Room Systems is accessibility and inclusivity in a box - for everyone with and without hearing loss.

With the equipment supplied we include an onsite visit to go through the set up, charging routines, familiarisation and general use cases.

PDF files and helpful videos are available for easy reference, and ongoing telephone and email support is available for the lifetime of the system.

We do hope you found this information useful, any queries just ask.
